

# ProVision® 2

## Compact Advanced Passenger Screening

The ProVision 2 is the most widely deployed advanced personnel screener in the world. It quickly screens passengers using safe millimeter wave (MMW) technology to automatically detect concealed objects made of a broad variety of concealed materials – both metallic and non-metallic.

The ProVision 2's modern and attractive exterior is compact to fit into tight aviation checkpoint areas. On the inside, the ProVision 2 enhances security at any checkpoint by delivering robust Automatic Target Detection, high throughput, image-free privacy and safety.

The ProVision 2 has been optimized for aviation applications, and may also be suitable for select non-aviation environments.

### AUTOMATIC DETECTION

Automatic Target Detection software processes digital scan data to determine if the individual can be cleared through the checkpoint. If a potential threat is identified by the software, an outline highlighting the area(s) of concern is displayed on the operator's control panel over a generic mannequin figure. Security personnel can then assess the situation.

- › The ProVision 2 detects a broad range of aviation targets which include the following objects and materials (metallic and non-metallic): weapons, standard and home-made explosives (sheet and bulk), liquids, gels, plastics, powders, metals, ceramics, and other solids.
- › Meets or exceeds TSA and EU ECAC requirements
- › The ProVision 2 offers customers an upgradeable technology platform that can be enhanced through software updates as new threats and requirements emerge.

### SAFE TECHNOLOGY

Leveraging safe radio waves, the ProVision 2 offers advanced detection performance—without any health risks.

- › The signals created by the ProVision 2 are thousands of times less powerful than other commercial radio frequency devices such as cell phones, wireless handsets and other standard household devices.
- › The ProVision 2 does not use X-rays or ionizing radiation.

### HIGH THROUGHPUT

The ProVision 2 is built for high throughput. A quick scan provides aviation checkpoint personnel with the data they need to confidently pass an individual through a checkpoint.

- › Less than six second total processing time for the scan and decision
- › Can support processing 200-300 people per hour depending on the application
- › Replaces the need for time-consuming physical hand searches

- › TSA approved and deployed
- › ECAC EU CEP approved and deployed
- › Automatic detection, no images presented or generated
- › Parallel screening options for increased throughput
- › Automatic system diagnostics capabilities

Concealed items are highlighted on a generic mannequin

## IMAGE-FREE PRIVACY

The ProVision 2 is an image-free solution that eliminates privacy concerns.

- › Automatic Target Detection software eliminates the generation and review of images. Numeric scan data is analyzed by software without human intervention to determine if any threats are present.
- › Potential threat areas are then presented to the operator using a generic mannequin.

## SPECIFICATIONS

### GENERAL

**Inner walls:** Clear polycarbonate  
3 mm

**Outer walls:** PVC and clear polycarbonate 4.5 mm

**Height:** 2.36 m (7'9")

**Width:** 1.5 m (4'11")

**Depth (with ramps):** 2.27 m (7'5")

**Weight:** 681 kg (1500 lbs)

**Power:** 100 VAC - 240 VAC /  
1900 Watts Peak  
50 hz - 60 hz

**Operating Temperature:** 0° C to 35° C  
(32° F to 95° F)

**Humidity:** 10 – 90%  
non-condensing at room environmental temperatures and pressures

### SAFETY

- › Safe radio waves
- › Interior lighting
